

Wound Care Clinics: 5 Ways to Improve Patient Outcomes

As a wound care clinic, you bear much of the weight managing chronic wound cases. Your clinical team needs to be fully supported as they guide patients along challenging roads to recovery.

\$50 billion
is spent annually on WC treatment¹

6.7 million
people are affected by chronic wounds²

1 Ease the transition from acute to post-acute partners

Patients see multiple providers throughout their healing journey, leaving room for misalignment between points of care.

Reduce clinician confusion with a wound care program designed to promote alignment.

WCCs can foster consistently strong outcomes

2 Use products proven for wound management

Frequent dressing changes are painful, disrupt healing and damage patients' skin integrity.

Choose products designed for longer wear times and fewer dressing changes.^{3,4,5}

4 Promote consistent products and processes

Variations in wound treatments and dressings create a range of potential patient outcomes.

Adhere to a standardized set of proven products and processes that everyone can follow in any care setting.

3 Build staff-wide wound care expertise

With more general practitioners now responsible for wound care,⁶ you need an easy way to increase clinicians' WC knowledge and alignment of best practices.

Have wound care experts provide training and dressing selection and application guides to your clinical team.

5 Help patients adhere to a treatment plan

Extended healing times and readmissions may result from patients not sticking to their prescribed treatment plan.

Use a patient discharge kit to give patients the confidence and focus they need to adhere to their plan.

Get to Know Mölnlycke

Our trusted processes and solutions, simplified tools and training, and partnership approach provide strong clinical and financial outcomes in multiple points of care.

Let us prove it to you.
